UX Correlator

Aternity end-user experience × NetIM infrastructure

Investigate | **Slow start-ups**

Username	Device	Location	Start (local)	End (local)	
optional	optional	optional	Oct 27, 06:00 PM	Oct 28, 06:00 PM	**Find slow start-ups**

Leave the first three empty to search everyone. Start/End: the last 24 hours by default.

Slowest: a.user on LAPTOP-07, Oct 28, 07:52 AM: Total Boot Duration 212 s

1,240 start-ups. For each Aternity measurement: the typical time, and the time 1 in 10 start-ups are slower than.

Machine Boot	User Logon	Total Boot Duration
typical **38 s** · 1 in 10 over 70 s	typical **34 s** · 1 in 10 over 50 s	typical **80 s** · 1 in 10 over 140 s

Main causes

1. **Group Policy** (User Logon) was longer than normal on **23 PC(s)**, 31 time(s) in this window; behind 6 of the slowest start-ups. Branch A 21, HQ 2 **Hide who ▾**

PC	User	Location	Times	Most longer than normal	Last seen
LAPTOP-07	a.user	Branch A	3	45 s	Oct 28, 07:52 AM
LAPTOP-31	e.user	Branch A	2	41 s	Oct 28, 08:10 AM
LAPTOP-12	b.user	HQ	2	38 s	Oct 28, 08:05 AM

… and 20 more

2. **User profile** (User Logon) was longer than normal on **4 PC(s)**, 5 time(s) in this window; behind 2 of the slowest start-ups. HQ 4 **Show who ▸**

3. **Antivirus service** (Machine Boot) was longer than normal on **2 PC(s)**, 2 time(s) in this window; behind 1 of the slowest start-ups. Branch A 1, HQ 1 **Show who ▸**

	When	User	PC	Location	Machine Boot	User Logon	Total Boot Duration ▼
▼	Oct 28, 07:52 AM	a.user	LAPTOP-07	Branch A	**96 s**	**109 s**	**212 s**

What took the time: **Group Policy** 55 s (45 s longer than normal) User Logon · **User profile** 20 s (5 s longer than normal) User Logon

> **Why:**
> ◦ Most of the extra time: Group Policy took 55 s, 45 s longer than normal (User Logon).
> ◦ Changed on LAPTOP-07 in the 14 days before Oct 28: Oct 27 VPN Client Updated 5.1 → 5.2; Oct 22 Office Updated.
> ◦ Same cause as main cause 1 above (Group Policy): see there who else is affected.

	Oct 28, 07:30 AM	d.user	LAPTOP-21	HQ	–	**47 s**	–

One row per start-up: Aternity's measurements of the same PC within an hour. Click a row to see what took the time and why.

By location

Location	Start-ups	Typical Machine Boot	Typical User Logon	Typical Total Boot Duration
Branch A	84	52 s	41 s	104 s
Not Mapped	910	39 s	35 s	82 s
HQ	246	33 s	30 s	70 s

How to use it

1. Search everyone, or narrow to a user, a PC or an Aternity location, between Start and End (last 24 hours by default). Click 'Find slow start-ups': a progress list shows each step until the result appears.

2. The slowest start-up in one line, then one card per measurement type, named as Aternity names them: the typical time and the time 1 in 10 start-ups are slower than.

3. Main causes: the parts Aternity measured as most 'longer than normal' in the 10 slowest start-ups. Each line counts every PC where that part was longer than normal in the same Start/End, by location. 'Show who' opens the list of those PCs; 'Hide who' closes it.

4. One row per start-up, slowest first by the type marked ▼. With one user or PC searched, each value shows 'usual N s' under it (that PC's 30 days before Start). Rows with ▸ open what took the time and, for the 10 slowest, why: the slowest part, what changed on the PC in the 14 days before, and which main cause it belongs to. Click again to close.

5. Shown when there is more than one location: the typical time of each type per location, slowest first.
